Instruction to run the code

R Code:

- ➢ Run the code up to line 160 to find the best method of outlier imputation.
- ➢ Then re –run the code from line 9 to 100.
- ➢ Then skip to line 170 and you can run the rest part at a go.

Python Code:

- ➢ Run the code up to line 135.
- ➢ Then re-run the code from line 15 to line 126.
- ➢ Then skip to line 138 and run till line 160 to find the best method of outlier imputation.
- ➢ Again, re-run the code from line 15 to line 110.
- ➢ Then skip to line 168 and you can run the rest part at a go.

NOTE: Please refrain from running a large portion or many lines of code at a time. As doing so may give rise to many irrelevant values.
